Dear Doc:

25X1A

25X1A

Since we were not able to discuss with P-E the proposed return to utilizing the hangar instead of a new building, I am sending you two more copies of the drawing made by [redacted]

I was very much disappointed that it has apparently been decided that our (P-E and us) end of the project was not important enough to justify the new building. But even more discouraging is the knowledge that so many weeks have gone by without letting me know of the change in plans.

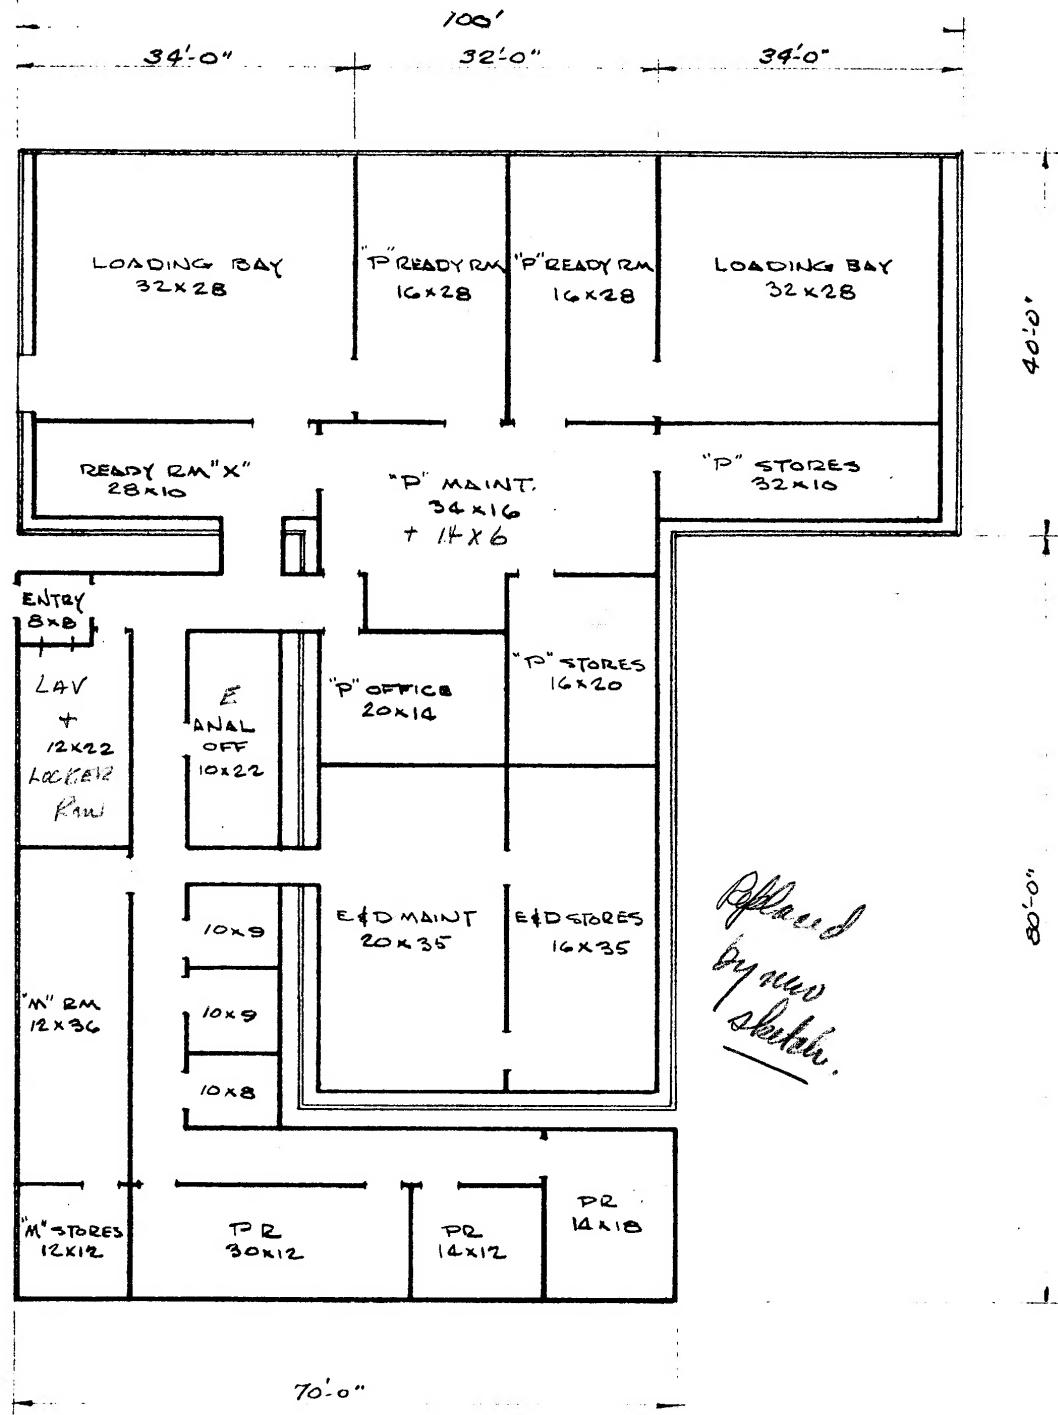

25X1A

As laid out in the hangar and attached structure, the total area is 9600 sq. feet. This compares with 10,800 for the proposed new building. Since I have tried to continue to give P-E all the space they requested, the reduction has for the most part come out of my area and I would object strenuously to any further attempt to compress our space.

[redacted] tells me that they must have a decision on this structure in November 1960 if it is to be completed by the summer of 1961. I would appreciate action on your part to discuss it with P-E and at Hqs. so that a decision can be reached and detail planning started by all concerned.
